ESF DATABASE MIGRATION TOOLKIT
Database Migration Between Various Database Systems in Minutes!

EasyFrom Inc(Dec 2, 2009) *ESF Database Migration Toolkit - a wizard-style software helps you to migrate data form one database system to another in minutes!*

As a DBA(Database Administrator) or Database Developer, migrating database from one system to another (e.g. Oracle to MySQL, PostgreSQL to SQL Server, MS Access/Excel to MySQL and so) is a frequently work, unfortunately, it is not an EASY task because there are many of difference features between those database systems, difference in SQL syntax, data type, properties, character-set(data encoding), and some others' limitations.

Usually, those database systems had provided export/import tools, so we can using these tools (e.g. Oracle IMP/EXP, mysqldump, mysqlimport) to export source data to a script file and modify the script data in keeping with the target data formats, then import it to the target database. If you have a few data to be migrated, you can do it manual, but if you have a large database including hundreds of tables, thousands of indexes/primary keys/foreign keys and millions of records ..., it would take days or even months of time to do this task, you have to pay a lots of money for it!

EasyFrom Inc, a leading database software provider had developed ESF Database Migration Toolkit to help you migrate data from one database system to another in minutes!

ESF Database Migration Toolkit is a step by step wizard-style software, supporting migrate data between most of popular DBMS directly (MySQL 4.1x-5.x, Oracle 8i-11g, PostgreSQL 7.x-8.x, SQL Server 97-2008, IBM DB2, MS Access 97-2007, MS Excel 97-2007, Visual FoxPro/dBase, FireBird, SQLite, Paradox 3.x-7.x, Lotus 1-2-3, CSV/Text ...), it also migrate data from any ODBC.

Just 3 simple wizard-steps:

- **1. Choose a Data Source**
- **2. Choose a Destination**
- **3. Select Table(s) & View(s) which will be migrated**

Then submit migration, ESF Database Migration Toolkit would automation migrate table structure, data(any kind of data, LOB, binary, timestamp also), indexes, primary key, auto-increment and etc. If you are migrating data to a difference target character-set(UTF8, ISO8859-1, Latin1 etc), this software can transfer data correctly automation.

ESF Database Migration Toolkit is very easy to using, but it is also a power toolkit! It provides some advance options: re-name table name/field(column) name, re-map field, data type, size, properties, default value, change character-set or filter data in transform. In professional edition also provides save/load migration job and running migration job via command-line tool, so that you can run migration job from Windows Task Scheduler.
